

CLAIRE DAVIS

BESPOKE PERMANENT MAKEUP

Pre Procedural Advice Sheet

It is advisable to wear your normal makeup on the day of your permanent cosmetic procedure as it will give clear indication to your technician of your preferences, expectations and of what you would like to achieve. Avoid Aspirin or Ibuprofen before your treatment, as this can make your skin more prone to bruising. Do not however discontinue any medication without prior consent of your general practitioner. A patch test will be required before undergoing the procedure unless waived upon request. It is advisable not to drink alcohol the night before the procedure.

Eyeliner Procedures

- Do not wear any eyelash extensions prior to arrival
- Any eyelash tinting or perming should be carried out at least 2 weeks prior to your appointment
- Do not wear contact lenses during or immediately after your treatment. It is advisable to rather wear glasses.

Lip Procedures

- Any waxing or bleaching treatments should not be carried out for at least 2 weeks before or following your permanent cosmetic treatment
- Permanent Cosmetic treatments do not cause cold sores, however, if you carry the virus it is advisable to take your medication or an anti-viral medication from the chemist such as Zovirax once a day for at least a week before your appointment and a week after treatment to reduce the chances of an outbreak

Eyebrow Procedures

- Waxing should be done at least 2 days prior to your treatment, and electrolysis no less than 5 days before the appointment

** If any surgery has been carried out recently, it would be advisable to get your doctors consent first.*

It is important to note that the results of pigment implantation will be determined by a variety of factors such as skin tone, skin characteristics, PH balance of the skin etc. which therefore means each individual will be different.
